SUMMARY

Frontend-focused engineer with production experience building React and TypeScript applications at LinkedIn and a high-growth startup, from accessible, high-traffic UI to REST API and MongoDB integrations and A/B testing. Comfortable owning features from design through production and explaining technical tradeoffs to both engineers and non-technical stakeholders. Returning after a year of volunteer work abroad, with a recent TypeScript and Anthropic API project covered by an eval suite.

SKILLS

Languages/Frameworks: TypeScript, JavaScript, React, Node.js, Redux, Ember.js, SCSS, HTML/CSS, jQuery, Python (basic)

APIs & Data: REST APIs, GraphQL, MongoDB, SQLite, SQL (basic), Anthropic API (tool use)

Tools & Practices: Git/GitHub, CI/CD, Jest, Figma, Agile (Scrum, Kanban), Jira, A/B Testing & Experimentation, Accessibility (WCAG), Code Reviews, On-Call & Root Cause Analysis, LLM Evals, Claude Code

EXPERIENCE

LinkedIn Feb 2022 – May 2025

Software Engineer IC2

- Developed React and TypeScript components with analytics and accessibility features for the Notifications tab, improving the experience for millions of daily users.
- Designed and ran A/B tests using LinkedIn's internal Lix experimentation engine to compare UI variations, using click-through rate and session-time signals to guide design decisions, and built a survey component for direct user feedback.
- Contributed to the migration of the News sidebar component and 2 Home Feed post components from Ember.js to LinkedIn's internal Pemberly framework, modernizing the codebase while preserving product parity.
- Partnered cross-team with Settings on a 3-4 month project restructuring how notification toggles were bucketed and labeled, building the UI and joining planning meetings that defined API shapes and how the backend connected to the frontend.
- Maintained 99.95%+ production uptime through monthly on-call rotations, mitigating incidents and performing root cause investigations, while sustaining 80%+ automated test coverage and 3-4 code reviews per week.

Pilotly Aug 2020 – Feb 2022

Web Engineer (Project-Based Contractor, Mar–Aug 2020)

- Built pixel-perfect clone platforms of 4 major streaming services (Netflix, Amazon Prime, Peacock, Apple TV+) in React, functioning as a market-research and user-testing tool for client content and ad-placement decisions.
- Integrated REST APIs and MongoDB to track engagement signals (watch-through, click paths) across ~10 weekly user tests, giving client teams data-driven insight into content and design decisions.
- Scoped a customized SVOD environment with Apple TV+ engineering liaisons, extending the platform to handle varied ad placements in video and across the UI, and presented live demos to internal stakeholders, sales teams, and external clients.
- Designed and built a custom video-conferencing focus-group tool (Dolby, Stream.io APIs) supporting up to 14 participants, with moderator controls, content-security blocks, and a one-way "back room" observer mode; served as the engineer on call during customer test runs, debugging issues live.

PERSONAL PROJECTS

- ClauseCheck (github.com/rebeccalambert/clausecheck; TypeScript, Anthropic API, SQLite): Built a tool-using LLM agent that answers contract questions and cites its sources, with an eval suite that fails any citation to a clause the agent never opened. Repeated runs exposed an intermittent bad-citation failure (~15% of runs); a prompt fix brought it to 0 in 26 runs.
- Daily Tracker (rebeccalambert.github.io/daily-tracker/): Built and deployed a personal productivity dashboard using Claude Code, integrating Google Calendar, Gmail, Drive, and Habitica APIs with two-way sync back to source platforms.

VOLUNTEER

International Student Mentorship Program Jun 2025 – Jul 2026

- Provided professional and academic mentorship and led workshops for up to 100 attendees during a 1-year career break, before returning to continue a software engineering career.

EDUCATION

University of California, Berkeley — BA Cognitive Science (2016)

App Academy — Software Engineering Bootcamp (2019)
